

FOR IMMEDIATE RELEASE: April 1, 2008, West Hills, CA

EXHIBIT LIGHTING GROUP ANNOUNCES WEBINAR SERIES.

Exhibit Lighting Group is launching its Webinar series with "Back to Basics," a session which will educate viewers on the process of creating and executing a project. "We are going to talk about how a job goes together, what is needed from the client, the process behind the project, why we need what we need, and what the client can do to help us produce a better solution for them," says Mike Janetzke, General Manager of Exhibit Lighting Group.

"This [first Webinar] is a unique opportunity for viewers to 'go inside' our operations and learn what happens behind the scenes of project planning," commented Jeff Rudner, President and CEO of Exhibit Lighting Group. "All of the Webinar Chapters will provide content-rich education on topics and issues that our clients have expressed interest in learning more about. 'Back to Basics' specifically addresses some of the very basic elements in the planning of a project...some items that we all may take for granted."

"Back to Basics" is the first Webinar Chapter in Exhibit Lighting Group's series: Best Practices in Theatrical Lighting and Production, an eight-chapter series available for free. Subsequent chapters will be released and available for download monthly through December (skipping August for summer break) and include topics such as new technology, design trends, and practical applications.

All of Exhibit Lighting Group's educational materials are available at no charge by visiting the Education page of the company's web-site, www.exhibitlightinggroup.com/education, and following the instructions.
